GIANT DOUBLE PETUNIAS

Intensive work continues on the All Double Petunias, and each year they improve in size, plant habit and color range. The seeds are necessarily very expensive due to the fact that they have to be carefully hand pollinated and there is real art and scientific knowledge required to produce seed which will give consistently Double flowers. The seed are smaller and the seedlings weaker than the Single kinds, require care in starting.

Sow the seeds on Milled Sphagnum Moss in accordance with directions we provide with the moss. Moisture control is simplified, "Damping Off" eliminated. Park's "Sure Fire" Starter Kit (See Pg. 71) makes growing Double Petunias easy and sure. The seeds are very small, and the 25c pkts. contain only a few seeds. The larger Pkt. is the better buy. After the All Double Petunias get past the baby plant stage, they are quite vigorous and can "take it" even where summers are hot. Outstanding for beds, borders, accent points.

F₁ Hybrid Petunias

Bring a New Era in Home Beautification

So dependable you can paint your garden scene with them, assured it will be just as you planned, remaining that way all season.

F₁ Hybrids are produced by carefully hand crossing individual blooms from two selected inbred parents which in turn were especially developed for the superior qualities they impart to the cross.

THESE SUPERIOR QUALITIES ARE:

GREATER VIGOR. Faster, stronger growth, quicker bloom, larger flowers, brighter colors and heat resistance to carry through the summer in good condition.

GREATER PRODUCTION. More plant—More Flowers.

GREATER UNIFORMITY. Flower color and plant habit show almost no variation, so you can be sure of the result.

NEW COLORS. Are offered here which were not possible except as F₁ Hybrids.

MOST MODERN. An F₁ Hybrid Petunia has won an All America Award almost every year since 1952. F₁ Hybrids represent a great advance in Floriculture, perhaps the most significant of our generation.

For more carefree gardening, easier, more luxurious living, plant Free Blooming F₁ Hybrid Petunias.

ZVOLANEK'S SUPERIOR PEAS

We feel that the fine varieties offered below are the best Sweet Peas grown today. They are the result of years of painstaking selection on the part of William Zvolanek, veteran California Sweet Pea breeder. These three types of multi-flowering Sweet Peas have terrific vigor which manifests itself in an abundance of extra long (18-20") pencil stems, each carrying 5-6 even up to 8 flowers instead of the usual 3 or 4; and in marked heat resistance.

Early Multiflora.

Earliest to bloom, yet vigorous and heat resistant. Under proper culture yields the finest Sweet Peas it is possible to grow.

1973—EARLY MULTIFLORA MIXED. A complete, balanced blend of about 30 varieties in all Sweet Pea colors.

Flori-bunda (Spring)

Especially for outdoor planting, these bloom two weeks before the late type and are very strong in growth and heat resistance.

1990—FLORI-BUNDA MIXED. Pink, lavender, purple, white, cream, rose, salmon, cerise, carmine, red, blue are all represented in this choice blend of colors.

Plenti-flora (Summer)

Growth is very strong and lush. Does well everywhere.

1967—PLENTI-FLORA MIXTURE. A complete full color range.

1968—SULPHUR YELLOW. Zvolanek's Plenti-flora. Deepest cream or light sulphur yellow.

PRICES ALL PEAS ABOVE: 50 seeds 25c; 250 s. \$1.00; oz. \$1.50.

HEAT RESISTANT SWEET PEAS

Are Sweet Peas Hard to Grow in Your Climate?—Here's The Answer.

Cuthbertson's Floribunda

Not only do they continue blooming long after hot weather has come and other sweet peas have died, but they begin blooming two weeks ahead of the Standard Spencers. The flowers are of the true Spencer Orchid Flowering type with long stems and wavy petals. Large and deliciously fragrant, they are produced in great quantity on plants of exceptional vigor. The colors are bright and clear. If you grow only one strain of Sweet Peas this is the most practical.

2003—LOIS. Rose pink on white ground.

2004—JIMMY. Best scarlet variety.

2005—DAISY. Pure white.

2007—DANNY. Dark blue.

2006—CATHERINE. Salmon rose on cream ground. Above colors: **Pkt. 25c; oz. \$1.00.**

1965—CUTHBERTSON'S FLORIBUNDA MIXED. Extremely vigorous, long stemmed, heat resistant; all the attributes of regular Cuthbertson's, but provides more bloom under comparable conditions, and greater perfection of flower form. Well grown, each long stem will bear 5-6 blooms. It replaces the older strain in our list. **Pkt. 25c; 1/2 oz. 60c; oz. \$1.00; 1/4 lb. \$3.00.**

1962—NEW GIANT HEAT RESISTANT MIXED. In originator's tests these, Giant Spencers, Earlies and Cuthbertson's were given identical care. These produced long stemmed flowers abundantly thru July into August, long after the others failed. Won't you try them? **Pkt. 25c; 1/2 oz. 75c; oz. \$1.35.**

FROSTPROOF ANNUALS

You can have cut flowers or blooming borders long after the first frosts by shearing back the plants before they set seed or by planting in late June. The following annuals are not killed by anything less than freezing weather.

Alyssum	Nierembergia
Centaurea	Pansies
Calendula	Scabiosa
Carnation	Snapdragons
Dianthus	Stocks
Eschscholtzia	Wallflower
Larkspur	Verbena
Petunia	Viola

Ginger Snaps

(Panorama)

These are the Famous F₂ Hybrid Outdoor Snapdragons Developed through years of Intensive Breeding Work by the Eminent Hybridist,* Mr. Charles Weddle.

There is no finer Snapdragon than the Ginger Snap, with the single exception of the magnificent new F₁ Hybrid Rocket shown and described on pages 2 and 3. (The Rocket is also, of course, a Charles Weddle development.)

Ginger Snap was developed specifically for the home gardener. Although the seed is inexpensive (considerably less than the still-rare Rocket seed), it comes in the widest range of beautiful colors, as listed below.

The plants build a heavy foundation before starting to bloom, thus they are a week or two later than Carrousel, below. The revelation comes when bloom begins. The plants branch from the base, providing a multitude of heavy cane-like 2½ ft. stems to hold the heavy spikes of extra large florets. They need no staking. The colors are very bright and clear with a glowing sheen to glisten in the sun. The plants are of uniform height, so look well in the border. Ginger Snaps take adverse weather in stride and the heavy textured flowers keep well. Cut all you want, for if kept picked, the plants bloom and improve until the hard freezes of late fall.

Ginger Snaps in your garden will be the envy of the neighborhood. Try some this year. They're in highest fashion.

Extra Early, Colorful

121A—CARROUSEL. F₂ Hybrid Snapdragon. Like a merry-go-round on a color wheel! All colors present in Snapdragons are represented in this fine mixture. Plants are extra early, fast growing and uniform in height at about 28" with flowers evenly spaced on long stems. We recommend using Carrousel in conjunction with Ginger Snaps to lengthen the season of bloom. Pkt. 25c; 1/16 oz. \$1.00; 1/8 oz. \$1.75.

* Mr. Weddle is eminent for his work on F₁ Hybrid Petunias, some of his most recent creations being Comanche, Paleface, Firedance, Prima Donna to mention but a few. He was the first American to discover the secret of producing All Double Petunias. See pg. 19.

Park's COLOSSAL SNAPDRAGONS

GIANT RUSTPROOF ANTIRRHINUM, the flowers are very large, fragrant, of the most varied and exquisite colors and variegations, and borne on long spikes. F₁ Hybrid Snapdragons

Bred especially for the Florist.

Fine for the Home Gardener Too.

Our comparative outdoor trials showed marked differences in favor of the Hybrids. The hybrids had more flowers and better spikes, brighter, non-fading colors, more even uniform growth, better, straighter stems, and no rust. For beds, borders, cutting or greenhouse forcing, these are tops.

The HIT PARADE varieties listed here will bloom at least 2 weeks ahead of the Rocket Snaps offered on Page 2. They too, are very fine garden varieties tho not quite so tall as Rocket. We suggest they be planted with Rockets to extend the season of bloom. The two compliment each other. Hit Parade blooms, then as first bloom is ending and Hit Parade is all cut, the Rockets come into full flower. By the time Rockets are ready to cut back, Hit Parade is beginning to bloom again.

For winter bloom in your home greenhouse, Hit Parade is the ideal choice.

PERENNIAL FLOWER SEEDS

Pages 34 to 44 bring you the broadest assortment of fine perennial flower seeds that we have ever offered. With permanence and charm, perennials are truly "things of beauty and a joy forever."

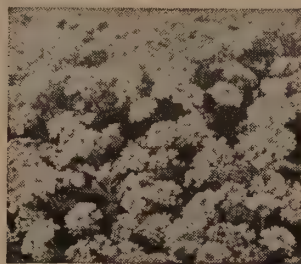

These are valuable subjects of the flower garden, as most of them are not only showy and beautiful when in bloom, but will do service year after year for a long period, enduring cold, excessive rain and drought. They are easily grown from seeds sown in spring or summer.

hp. HARDY PERENNIALS are hardy plants which will live and bloom every year for a long period. They are very valuable for borders and cut flowers, and once established require less care than the annuals. Hardy perennials listed pgs. 34 to 45 begin blooming the second year from seed.

hb-HARDY BIENNIALS are those which bloom the second year from seed, then die. For a continuous display of this type, seed must be sown every year.

Primrose Cultural Notes

Sow in pots or pans as early in the year as possible, water, cover with glass and place outdoors where the soil will be frozen. When milder weather sets in bring into gentle warmth and seeds will germinate freely. Freeze seeds in ice cubes for similar effect. Allow plenty of time—seeds are often tardy. Primulas need partial shade, rich, porous soil, and a mulch of pine needles or salt hay to keep roots cool—this seems the answer to growing them in warm climates. They like the east side of a hill, shelter from wind, good drainage.

AVAILABLE SEPARATELY FOR YOUR CONVENIENCE

Many years ago, we began a continuing test program. Its goal; to find sure and easy to use methods and materials for germinating seeds and growing plants at home.

Little headway was made until about five years ago, when we came up with milled Sphagnum moss, Jiffy Pots, Electric heating cables, Jiffy Flats. Combining these with proven methods gave us the desired "Sure Fire"® way of growing seeds. *"Park's Gardener's Handbook", completely re-edited and enlarged gives complete directions with superb photographs of every step.

We are certain that the materials and method we now offer are the best to be had in the entire floral industry. This is evidenced by our own laboratory tests and by the letters from our customers telling of their success in growing even the most difficult kinds of seeds.

Controlled Light Makes Seedlings Grow Strong

Seedlings need much higher light intensity than full grown plants. A window often does not give enough light to grow strong seedlings, especially in the sometimes prolonged cloudy and rainy periods of early spring. When too little light is given, tall and spindly plants will result. Scientific studies and our own experiments proved that you can achieve the same ideal light conditions of a greenhouse in your own home by applying artificial light. Simple to use, illustrated instructions included.

"You Get the Best from Park"

January 1, 1961

Dear Friends:

We welcome you to the great Floral Kingdom and its treasures to be found in the pages of Park's Flower Book. Welcome to the thrills and satisfaction, to the beauty and the joy, to the sharing and the loving, which is gardening.

The urge to participate in the miracle of growing things is universal and wells in every man's breast. Because of this, no matter what he wants to accomplish by gardening, he will find that "Half the Fun is in the Growing."

A nationwide survey, recently conducted, found that people garden for many different reasons. Among them were: to have flowers to arrange and to share with others; to have the newest and most spectacular flowers, to show pride in home or community; to spend peaceful, pleasant hours outdoors; to enjoy the exercise and change from the demands of the work-a-day world; for the great satisfaction in growing the challenging and difficult varieties; and for the deep personal or religious experience in working close to nature and God.

We have gathered over 3,000 kinds of the finest flower seeds from all over the world, grown by men who have dedicated their lives to the creation of more beautiful flowers. This year we offer exclusively from our own breeding program White Christmas Begonia, Chartreuse Coleus, New Double Gloxinias, and White Riches Petunia, all pictured on our front and back covers.

To insure you that success will be easily yours, we provide the finest seed, Park's "Sure Fire" Seed Starter Kit (page 70), a brand new Children's Growing Kit, and a completely revised "Park's Gardener's Handbook." Thereby, we make it true for you that "Half the Fun is in the Growing."

We look forward to the pleasure of serving you, and wish you success and happiness in your gardening adventures.

Floricordially,
GEO. W. PARK SEED CO.

Geo. W. Park
President

"A good name is rather to be chosen than great riches." Proverbs.

...and here are some Reasons Why:

A TRADITION of DEPENDABILITY for 93 years

GEORGE W. PARK began selling flower seeds in 1868, and through his catalogs and "Park's Floral Magazine," he served gardening enthusiasts all over America. He is now almost a legend in gardening circles.

Not long before his death in 1935, "Fortune Magazine" published an article about his business career. He was described as the "Bete Noire of the Seed Trade," because he insisted on selling his fine seeds at considerably less than other seed firms.

He truly believed and lived his creed "Your success and pleasure are more to Park than your money." This was his interpretation of the verse from Proverbs: "A good name is rather to be chosen than great riches, and loving favor rather than silver or gold."

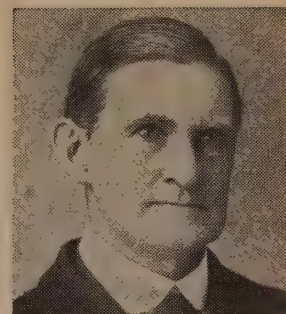

While this policy did not make him rich in worldly goods, he was rich in friends, for he felt each customer was his friend.

George W. Park left a great heritage to his sons George and William. Along with it went a great responsibility to serve the flower lovers of America with the finest flower seeds at reasonable prices, and in such variety that everyone would find his every wish in "Park's Flower Book."

His favorite prayer by John Henry Jowett expressed Geo. W. Park's faith in God, in his fellow men, and in the spiritual value of gardening.

GOD'S LOVE, AND BEAUTY

"My Father in Heaven, help me never to forget Thy Love to me. It comes with the light of the morning, and it remains with the light of the stars of the night. It looks up to me in the beauty of the flower. It shines upon me in the smile of a friend. All beautiful things are the gifts of Thy love. Help me to be thankful, and to link every beautiful thing with Thee. —Amen." JOHN HENRY JOWETT

GEO. W. PARK
1852-1935

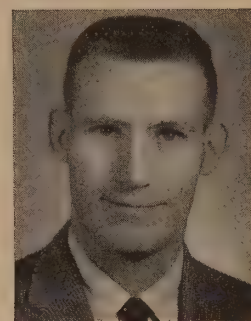

CONTINUING THE TRADITION

GEO. B. PARK

Geo. B. Park endeavors to make sure that the seeds packed under the Park label are the "Cream of the Crop"; that every worthwhile new variety, every good older one is presented to you accurately in "Park's Flower Book."

William J. Park endeavors to make sure that Park's service is superior in every way; that Park's catalog for commercial growers serves them well; that the breeding and trialing programs are well done, and that careful research enables us to maintain and improve the quality of the seeds we offer.

WILLIAM J. PARK

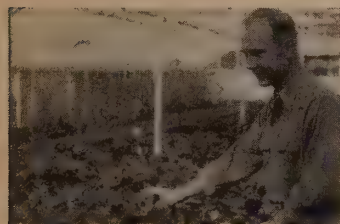

PARK'S TRIAL GARDENS

We feel that one of our most important services is represented by these trials, which are conducted solely to compare available "strains."

Each year about 2000 samples are grown. From planting to maturity, they are carefully evaluated. Trials in the North, Mid-West and West are also evaluated. Based on the results of

these trials, we make certain that the seeds supplied you under the Park label are grown by the specialist who is doing the best job on that particular variety. In this way we know that "You Get the Best from Park."

Latest Developments, Highest Quality

Double Gloxinia Seed and Plant Production under the watchful, careful eye of Klaus Neubner, Park plant breeder and production supervisor. New varieties and maintenance of quality require constant skillful control.

PARK'S GREENHOUSES

Our greenhouses are modern in every respect. Automatic heating, ventilation, cooling and watering assures plants of the very best quality for you. Packing and shipping room is an integral part for quick efficient handling.

Three most important functions of our greenhouses are: The germination tests* conducted to assure the vitality of our seeds; the trials of window garden and greenhouse seed strains; the breeding program which is carried on in them.

*Germination tests are also made in seed department germinators.

THE PARK ORGANIZATION

Our organization, built over the years since 1868, is highly efficient and stands ready to serve your every gardening wish.

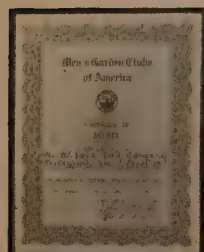

We'd like to take you through our plant—to show you how carefully the seeds are stored; how conscientious are our co-workers; and the modern methods by which your orders are handled.

Perhaps the most important reason we can give such prompt and accurate service is that the Park staff is made up of folks who are interested, not in just a job, but in giving a service. They take pride in getting your order out the day it comes in. They're proud to send the good seed we have for you, and they feel a warm bond of friendship for Park customers. This is part of the tradition.

Packing 3000 Varieties takes Experience

They're hand packed with utmost care, befitting the finest flower seeds grown, under the competent guidance of Myrtle Stevens, with Park since 1933. Ella Vines and Alice Gambrell are shown packing flower seeds. Packets are sealed by machine.

PARK BRINGS YOU THE WORLD'S FINEST FLOWER SEEDS

We are highly honored and humbled. The Men's Garden Clubs of America presented us with the certificate of Merit for: "The introduction of outstanding plants over a period of years." Many of the seeds we sell come from careful European Floriculturists whose work is a lifetime labor of love. Last year William Park visited many of these.

The Cessna 195 "Parkspeed III" helps in our quest for new varieties. It takes us all over America to evaluate trial gardens, visit our growers, check on the crops, and to observe new things in breeders' work shops. We see how our new flowers will perform in all sections of the country before we introduce them.

INDEX, GERMINATION and CULTURE GUIDE

When sowing seeds it is always best to divide the packets and sow at different times. Note the time and give good care until the plants have had time to appear. The following table gives the time normally required for germination of each variety of seeds. This time may vary as much as 25% either way. Do not condemn seeds until you have given them at least two or three trials. Those marked z or having the dagger (†) beside them may lie dormant for a year or more. The other tables are self explanatory, and while they are somewhat complicated, do give a great deal of information about each of the hundreds of species listed.

SUMMER FLOWERING BULBS & ROOTS—See pages 77 thru 87

You Have Chosen the Finest Flower Seeds Grown—Protect Your Investment in Seeds, Time, Plans and Dreams, with the Best, Most Certain Method of Starting Fine Seeds
See pages 70 and 71 for details.

SELECTING AND SOWING

If you wish seeds to sow in a garden bed or to present to children, or if you have had but little experience in raising flowers from seeds, select such flowers as Alyssum, Aster, Balsams, Cosmos, Calendula, Candytuft, Oriental Pinks, Gailardia, Helianthus, Marigold, Mignonette, Bedding Petunia, Pansy, Phlox, Ricinus, Scabiosa, Nasturtium, Valeriana, Verbena and Zinnia; for vines get Cobaea, Cypress, Dolichos, Gourds, Morning Glory, Thunbergia. Even in sowing these, it is well to prepare the bed carefully in a sunny exposure: place a low board frame around it and after sowing, water and cover with a newspaper until plants appear. If you sow seeds in the open with full exposure to rain, wind and sun, you should not complain if few of the seeds become plants. See pages 70-71 for latest methods.

TO CONTROL 'DAMPING OFF'

'Damping Off' is a microscopic fungus growth which attacks the baby plants just as they emerge from the ground or while they are still small, and is the reason for many failures which are blamed on the seed, especially where very small seeds are concerned.

Sphagnum moss is a sterile antibiotic material in which fungi and bacteria cannot live. We have found sowing seed in Sphagnum a positive Damping-off control.

Where this is impractical, as with an outdoor bed or cold frame, spray the soil, just as the seedlings appear, with Semesan solution (½ oz. to gallon of water). We offer SEMESAN in ¼ lb. pkg. \$2.50. This is enough to spray 480 sq. ft.

PELLETED SEED

Makes sowing easier

Increasing the size of very fine seed makes it easy to handle and to space properly. You can see where they are. The coating protects the seed and furnishes plant food and disease protection.

The technique of applying an inert coating to seed has advanced greatly in recent years. Pelleted seed is now reliable and quick in germination. It requires different handling than ordinary seed, so be sure to follow the directions we furnish with seed.

Gladiolus Landmark (top) and Little Pansy

Planting may begin as soon as the soil warms in early spring, and the last planting should be made about 12 weeks before the first killing frost. This is July 15 in the latitude of New York, and later in the South. By planting at two week intervals, bloom may be had from late June until frost.

Our bulbs are clean and healthy, high crown corms, guaranteed to bloom and give you pleasure and satisfaction. All are first quality No. 1 Bulbs 1½ inches in diameter.

Giant Dahlias

Are easily grown from Park's strong tubers

THE VARIETIES LISTED here are selected with painstaking care from the thousands of varieties in cultivation. Those listed on these pages are the best growers, freest bloomers, and those listed as mammoth will give the largest flowers Dahlias can produce. Growing show dahlias does take careful disbudding, and proper care.

KEEPING CUT DAHLIAS. Strip the foliage except at the top, recut the stem and immerse in water as hot as the hand will bear. When water cools transfer the Dahlias to cold water and place in the cellar overnight. Treated thus they will keep for several days and increase in size.

DAHLIA CULTURE. This subject including how to prevent disease and get rid of insect pests is covered fully in "The Gardener's Handbook." For bedding effects plant on or a week before frostproof date. For exhibition blooms plant late (May and June). Late planting brings the plants into bloom during late summer and fall when the cool temperatures promote better blooms.

EXHIBITION DAHLIAS. Exhibition Dahlias and satisfactory tubers can not be produced in the same hill. If you want 12 inch flowers, go after them with fertilizer, water and disbudding.

(1) FANTASIA, Double Gerbera

The cherished, full double, exotic form has heretofore been available only in plant form. Last year, to our delight, we were able to offer seed sent us by an Indian floriculturist which produced 50% double flowering plants. This year's crop of seed is significantly better. It now produces 75% full double flowering plants. The size of the blooms, earliness, and sturdiness of the plants is greatly improved. The color range is magnificent; clear-sparkling rose, pink, crimson, scarlet, yellow, white, cream, and many shades. **0863—FANTASIA MIXED.** 20 seeds 50c; 60 seeds \$1.35; 100 seeds \$2.
P310—PLANTS: MIXED. 6 for \$4.50; 12 for \$8.00.

(2) JEWELS OF OPAR

The foliage is bright deep waxy green, growing a foot high and forming a delightful setting for the airy panicle 1½ ft. stems. Great multitudes of small cameo pink flowers open every early afternoon, effecting a pink haze. Next morning, the flowers are all closed but each tip of the many branched stem has a ruby colored little seed ball. They are nice to dry for winter bouquets, the stems turning jet black, making the coral seed pods stand out. Sow where it is to bloom or start indoors for earlier bloom. Husky plants withstand summer heat, thriving and becoming more beautiful with each passing week. (Talinum paniculatum.)

(3) STOKES' ASTER, Stokesia

For cutting, Stokesia cyanea is perhaps the best of the summer blooming blue perennials. Decorative in the garden, long in bloom, with immense 4" fringed blossoms of lovely lavender-blue. Long lived 15" plants are just right for the border. Blooms first season. Easily grown.
1951—STOKES CYANEA. Pkt. 25c; 3 Pkts. 65c.

(4) LACED PINKS

Richly colored, delightfully scented, double, semi-double, and single flowers are freely borne on almost perpetual flowering, silvery-green foliaged plants. They are tenacious, hardy perennials which are easily grown. Not since Victorian days has this type been so popular, and here is the finest ever raised, all hand pollinated under glass. It has vigor, good habit, distinctive, beautiful markings. You will surely love Laced Pinks.

(6) PARK'S GIANT DOUBLE GLOXINIAS

A well grown double Gloxinia is one of the most spectacular house plants, normally having about 20 blooms open, completely crowning the plant, and 20 or 25 additional buds ready to carry on the procession of blooms for several months. The extra petalage adds a lot of extra color area by comparison with single varieties, making for a far more colorful display. A number of Double Gloxinia plants, seeds, and bulbs are now available, most of them exclusively from Park, having been developed by us. These are listed below; however, they are more fully described on pages 57 and 84.

Double Gloxinia Seeds

Grow all the plants you want from seeds for less than the cost of a single ready grown plant. Seeds produce 50 to 75 per cent double flowering plants, 25 per cent single.

0875—ROYAL RED. Bright, velvety red.

871A—ROYAL BLUE. Beautiful, deep royal blue.

0872—ROYAL FROSTED RED. Scarlet and white.

(1) ACHIMENES "Magic Flower"

For the shady bed or porch box in summer, for the sunny window in winter, or as a choice hanging basket plant, Achimenes almost hide their decorative glossy foliage with beautiful waxy long-keeping flowers. The clear jewel-like colors are among the most pleasing in the Floral Kingdom. The plants are almost ever blooming, needing only a short rest period in mid-winter. By nature, these bulbs are very small but very productive. Use 3 bulbs for each 8-inch pot.
